## Introduction

Thank you for taking the time to check out the Slipstream universe in its whole. I have been working on this story for close to 4 years now, and it has been written and re-written about twelve times now. This is considered to be the final scripted version of the Slipstream trunk. I hope you enjoy what you read, and learn some surprising things that have yet to be uncovered. While the Slipstream vein runs a lot deeper than what you have before you, I have yet to reveal it to anyone. It will be saved for a later time and date, or when it's ready. The first section is the “Quick Facts” area, which gives you the low-down on the current state of Slipstream, in *Slipstream: The Price of Freedom* for Homeworld 2. *Slipstream: T.P.o.F.* Takes place around the year 2631, near the end of the “Freedom War”. This will be the basis of all Fan-Fictions, Role plays, and Fanon from here on out. Also, please do not steal this work, I have worked hard on this universe for quite some time, and I hold it dear for personal reasons. If you wish to reference my work, please contact me via [srisajuuk@gmail.com](mailto:srisajuuk@gmail.com) . I am very fair when it comes to using things, so don't be hesitant or intimidated. Thanks!

### Quick facts

#### *Colonies*

- Both UNCG and DSCG colonies consist of dome structures, or underground facilities. terraforming technologies are not up to par as of yet. However, Horizon has been fully terraformed over the past 300 years, and several other planets have been in the process for a while. The DSCG currently have not utilized this technology.
- Colonies can range from total colonization, to only a few structures. Most planets in the UNCG consist of several city-states which can cover entire continents, and consist of many connected domes, or underground structures.
- Horizon is the odd-man out in this scenario. It consists of many cities that have grown out of their original domes, and are connected together. A single large city covers the entire northern part of the main continent. While smaller cities dot the rest of the planet. A large section near the equator is reserved for natural wonders.
- The DSCG use similar techniques to building colonies. The DSCG however, create top-side domes, then dig underground and build tunnels that connect each dome together. Even hollow out entire caverns, cap it with a dome roof, then build entire cities in the cavern.
- There are some colonies that float around stars without planets. These are usually stations that have some sort of military presence on them.

#### *Ships*

- There is no artificial gravity, only small sections in the ships that have centrifuges (ships are designed specifically for this, so floating down a corridor would be like walking down a hall).
- Hypersleep is used to switch crews every 3 months. They are also used to crew new ships, and replace fallen crew members. Hypersleep is a system which does not involve freezing, but involves suspending someone in a liquid, and attaching their brain into the ship's computer, and slows down brain activity to dream state, while the liquid is cycled through special tubes inserted down the throat for breathing (The Liquid) and for nourishment (Different liquid which is pumped in via tubes). Waste is drawn out via tubes in the kidneys, solid waste is non-existent due to the liquid's properties.
- Most ships are powered by a large fusion reactor, but also carry Solar cells which can be deployed to harvest solar power and store it in massive storage arrays.
- Ship engines are generally large nuclear drives, which utilize both fission and fusion inside a large reaction chamber, and the waste is directed out of a high-pressure nozzle system. Which can accelerate a ship very quickly. Note: most ships have the fusion power plant separate from the fusion drive, though more advanced ships (mostly UNCG) have a combined system. Anything smaller than a frigate uses a fast-burning Ion drive, or a simple fuel-drive. Another type of drive is a compressed gas drive, which is a large chamber of compressed gas with a nozzle that is opened for launch time.
- Ships do not have to be symmetrical. Period. They also do not have to be aerodynamic—there is

# Slipstream

## Official Story Line

4

no air in space. However, mass must be balanced correctly for thrusters to be proportional.

- Directed Energy Weapons (PPC's, Lasers, and Plasma bullets) are actually less efficient than any mass driver (Cannons, Railguns, Coilguns, Magnetic catapults). You need more power per damage (for mass drivers, this includes both the mass and the power needed to fire, and for energy, the power needed to charge said weapon).
- UNCG ships are built in large shipyards that orbit stars or large Gas planets. Shipyards are kept away from colonies, to make them uncompromisable via resistance.
- The UNCG's main shipyard however, is in orbit around the same gas giant as Horizon. It consists of a hollowed out dead-moon, with hundreds of dry-docks used for repair, salvage, and construction. *The Absolution* as it is titled, has giving birth to literally hundreds of thousands of vessels. She is the Home of the UNCG Imperial Guard, and home to several large corporations. Including IBM and Rhino.
- The DSCG's Main shipyard, Called *Foundry* is in a classified location in deep space. It consists of several Yards, and crew quarters, but can churn out a ship 4 days. While this does not rival the UNCG's main yard, the DSCG use many yards to manufacture ships.

### *Slipstreams*

- The Total Travel Time is always Equal to  $\pi$  (3.14159..) Seconds. This is because all Slipstreams (Tsaraii-Based or otherwise) Follow the equation  $\pi = L/R$  (or  $L=R\pi$ ) where **R** is the Travel Speed (LY/s), and **L** is the slipstream's length in Light-years. speed is a function of displacement.
- Slipstreams are like Electromagnetic wormholes. Unlike wormholes, they can move objects from one point to another without destroying it, or breaking it down. (however, Tsaraii slipgates use a form of compression to send matter across distances more effectively. This involves breaking down matter into Gamma Rays at varying frequencies/Amplitudes, sending them through the slipstream, and then using the Radiation to re-assemble the matter. It saves A LOT of energy when operating a slipgate, which uses a different slipstream type than a normal generator.)
- Slipstreams are Bi-Directional. Meaning one can enter both ends and end up on the other end. However, If you enter both ends at the same time, the matter will collide in the slipstream, and cause a surge which destroys the matter, the slipstream, and if using them, the slipgates, in a violent explosion. (Commonly called a Hypernova). Safety protocols in slipgates prevent this from taking place, where if you try to enter an incoming slipstream, it will automatically store your matter in local memory until the slipstream is clear.
- Slipstreams, Like all electromagnetic systems, have magnetic poles. The North pole always resides on the Outgoing side of the slipstream, and the South pole is located at the exit point. Also note that the slipstream also has poles opposite to the slipstream entrance (the back of the event horizon) which are the opposite of the front charge. (so an outgoing slipstream would have a north-poled event horizon, and a south-poled backing horizon. And vise-versa.)
- All forms of Matter and energy can traverse a slipstream. Nothing in Real-Space can effect a slipstream. However, massive electromagnetic fields that extend into higher dimensions can

# Slipstream

## Official Story Line

5

stop a slipstream. This includes Real-Space EMP's of significant power. Black holes do not stop a slipstream due to gravity, its because of its massive rotating electromagnetic field.

- Slipstreams, while not totally understood, actually travel throughout all dimensions of space and time. The longer the slipstream has to go, the more dimensions it must pass through. This tends to be a problem for any slipstream traversing areas over 46.83 Billion Light-years, which cause the stream to jump through time, and can actually cause a ship to exit at its desired location before it entered the stream. Slipstreams that do this collapse into black holes. Ironically, Slipstreams cannot be shorter than .07 Ly, because the slipstream will actually Collapse into an EMP, which can destroy any traversing slipstream with in 25 ly. The Tsaraii fixed this by creating a path that was 0.071 LY long and would slingshot back around to the position they wish to go within the 0.07 LY limit. (Consequently, the UNCG and DSCG adapted this same concept from the Tsaraii). The Standing theory is that the magnetic fields surrounding the slipstream over come the slipstream, and simply fold it up.

### *People*

- Many people do not wish to fight the war, and this plays a key role in the final break down of the UNCG & DSCG.
- There is a Lower and Upper Class in both empires. The Middle class disappeared over time.
- The UNCG Lower Class is composed of people with very low-paying jobs, or people without jobs. The Working class tends to be neglected, and do not make enough money for there to be a middle class. The lower class do not live very long, the max lifespan is around 30-40 years, due to heavy neglect from the government. Because of the absence of many affordable industries, many have to either make, or trade for the items in question. Take the Clothing industry for example. The overall style is rather dark and depressive, and is usually hand made (I think the overall term i'm looking for is either Gothic, Possibly Punk with a mix Neo-Victorian). The overall reason for this catching on is the overall feeling of depression living in broken down slums and undergrounds. Many also find it as a way to rebel against the Upper UNCG and the UNCG Government.
- The UNCG Upper Class is the more modern in all senses. With most of them inhabiting large estates atop massive buildings. The UNCG upper class is mostly composed of high military commanders, corporate officers and their families, and government officials. They tend to be more elegant in appearance, but are certainly more asinine. They tend to not even acknowledge the lower class' existence.
- The DSCG's Upper and Lower class has no definite division like the UNCG. The Lower class earns a lesser income, but can afford to stay afloat in the partial-socialist government. The DOL's hold on the upper class brings the contrast down as well, as the DOL require the upper class to help pay for their cause. The DSCG however, suppress the lower class with outrageous laws (think along the lines of USSR/Communist China).
- There has always been a small uprising building up in both factions. However, they both have not gained much power, as they are heavily suppressed by their governments.

- People in both Factions are also brainwashed via Propaganda, and via chemicals distributed in food and water.

### *Misc.*

- On the outskirts of star systems, there is something called the heliosphere. This Shields the said solar system from certain cosmic rays and charged particles. Ships outside of a heliosphere may experience problems with certain equipment. This is caused by particles and radiation emanating from the galactic core. No permanent problems have occurred from this, but there have been reports of people falling ill when working outside of ships, and even inside a ship.
- Time/Date is represented as coordinated Universal Time throughout the UNCG. The DSCG uses Martian Time. The Reason for this is to keep time the exact same throughout all UNCG ships and colonies. Local time is no longer issued per colony. The DSCG issue local times, but only use this to keep civilian's biological clocks operating correctly. While the UNCG simply have adapted to the UTC system.
- Home Computers usually run a Version of Linux or Unix, and use GPL software because of the economic downfall. Canonical, LTD's Ubuntu is popular among home users. However, the UNCG Upper Class usually uses computers from Apple or IBM (Apple's computers run a version of Mac OS v12.5.7 that was merged with Sun's defunct OpenSolaris, which was called Apple Unix, but was eventually retitled to Apple OS, and reset to v1.0.0. The Current Release in TPOF is v3.5.4. IBM uses a version of Debian that is combined with Free BSD. Debian, and its derivatives currently dominate the Linux Market in the UNCG. DSCG uses its own Government built Linux operating system, that runs on all computers.
- Both UNCG and DSCG Ships use mainframe computers to handle all the systems aboard the ships. UNCG ships use a flavor of Unix, while DSCG uses their custom Linux.
- The UNCG has a “Galactic Internet” system which uses Tsaraii-Derived Slipstream Beacons. The System is very complex and uses a very new IP protocol called IP64. Which uses 64-bit codes to represent Computers linked to the network. The Internet is actually managed by the UNCG government, and incorporates a lot of DRM to prevent Piracy. However, there are many ways to circumvent this. IP64 means we can host  $2^{64}$  computers on the entire network.
- The Tsaraii are the ancient race that mastered Slipstreaming Technologies. Their entire system of technology was built on the cornerstone of slipstream technology. No one knows what happened to them, only that they were destroyed by some great cataclysm, some time before the solar system even formed. They Used the Slipgate system for far more than what it is used for now. According to archaeological research, the Tsaraii's empire covered most of the visible universe, and not much is known of this race. Genetic material was able to be recovered from varies sites, but actual analysis has yet to reveal just what the Tsaraii look like. Their destruction has been theorized to be linked to their secret “Light-Forge” project. The Tsaraii technology is based on a Material code-named Valencium (Also called Slipstreamium) by UNCG scientists.
- Valencium (UNCG Def. Also Called “Slipstreamium” and “Tsaraiium” by DSCG) is a material

of artificial origin, mainly from left-over quantities generated by the Tsaraii. It is also a required mineral for slipstream generators. It appears as a Dark Purple crystalline material, that is very hard to break. Analysis shows that the material is composed of a form of dark energy encased between complex silicon bonds. The most abundant form of this material comes in a lattice-like structure, which gives it its crystalline form. No one has figured out how exactly this material can generate the massive electromagnetic field used for slipstreaming, as dark-energy cannot interact with matter electromagnetically. The standing theory is that the Dark energy somehow becomes excited when the silicon atoms are exposed to a direct EM field, and then somehow makes a direct connection to the dark energy via hyperspace interactions. (Possibly Gravitational?) This amplifies and projects the electromagnetic field hyperspace, and form a slipstream. No one is sure why this occurs, but the standing theory is that it has something to do with the the way dark energy interacts with hyperspace. This material is also used in weapons systems, due to Valencium natural tendency to sublime and ionize under a sudden electromagnetic field application. (somehow it is able to keep the dark energy encased in the field. Speculation leads to thinking the Tsaraii modified the dark energy in someway).

### Time line

-----Era I Begins-----

2017 - Major Terrorist Attack in India, Several Civilian Planes strike buildings. India Launches Nuclear attack on Pakistan, and on eastern Europe. 75% of the missiles are shot down, some hit targets. Several Countries launch a counterstrike destroy major centers in India. The world goes into a very heightened security level. Russia begins to pressure the world with its arsenal left over from the cold war, and try to get involved by blaming the west and east for India's destruction. They declare war on several countries in Europe. Traditional warfare pressured a country to launch a nuclear attack on Russia. The Attack is successful, and destroys the Russian capital of Moscow.

2020 - the remnants of Russia finally collapse into several smaller countries. The Oil pipelines leading into western Europe that were severed during the attack in 2025 have caused the European Union to destabilize. In a last ditch-effort, the European union dissolves all borders between member states, and works as one country. However, the economy in Europe collapses, leaving Europe in economic ruins. The United States, which has been recovering from economic pains during the first decade of the 21st century, feels the pain of the collapse. US companies with rich markets in Europe and Asia, along with Corporate investors, loose Trillions of dollars, and eventually have to fold up. The collapse of several major corporations, such as GE, Texas Instruments, DOW, Intel, DuPont, 3M, Alcoa, and United Tech.

2022 - the World Collapses under massive economic stress, the world plunges into a dark age.

2025 - Riots and Resistance have lead to civil upheaval. The Unites States is overthrown by an Imperialist party, backed by over 3/4ths the US population. a new American Empire is founded on the

Ashes of the United States. The American Empire adopts an Isolation policy, along with several economic restoration plans. New companies begin to form, replacing the economic Vacuum left 5 years ago. IBM Buys out Microsoft Corporation according to AE laws. Creating the first Super-Conglomerate, The IBM Corporation. Apple, Inc. Buys out VIA technologies, and several research laboratories. IBM and Apple are mega competitors with each other, but rarely attempt to block small business growth, as AE laws prevent it (AE is governed by a Administered Capitalism (similar to socialism)).

2030 - Rachael Valencia is appointed Empress of the American Empire. The American Empire moves troops into Canada, equipped with recovered weapons, and supplies, plus new technologies developed. No resistance at all. Canada is occupied, and later absorbed into the AE. Empress Valencia Initiates a new Economic Policy, which begins to rapidly bring the AE back up on its feet.

2040 - The European Union begins recovering, with the remnants of the ethnic groups that made up the EU scattered all over Europe, the EU remains to be a fully incorporated country, in July of 2040, the EU drafted its constitution and set of laws. The World begins to uplink back to satellites in orbit around earth, however countries use the systems to spy on other countries, and other forms of encrypted communication. 3 countries from the former Russian Federation form what is called the DSCG, or Dominion of Socialist and Communist Governments. (The naming was taken from the fact that one of the three countries were actually run by a small corporation operating out of said country).

2043 - The American Empire launches its new space program. The First vessel to reach orbit was a capsule titled Jupiter. Eventually, the Jupiter program would evolve into space stations, and eventual military program. The DSCG accepts a new member state. South America, which has taken the least damage from the global catastrophe, begins the framework of the South/Central American Union.

2046 - The American Empire launches Titan, a orbital weapons platform that uses high-power microwaves to destroy ground targets. Using the weapon, in August 2046, the Empire shoots up targets in Australia, and occupies the country with ground troops. In December, Australia is divided by its territories, and each sworn in as states of the empire.

2049 - American Empire adds onto the Titan Station, adding a construction dry-dock, and crew quarters. the South/Central American Union draws up a final treaty, bringing countries from Mexico to Chile into the Union. The DSCG grows to the size of the former Soviet Union, taking in countries from the EU which left the union in favor of the DSCG.

2050 - The DSCG launches its first new satellite. It is unknown what its exact purpose is.

2052 - The American Empire sends troops into Japan. Japan is overpowered and surrenders after a day. It is Incorporated into America.

2054 - The DSCG takes marches troops into the European Union. The American Empire invades Mexico, and takes it within 3 months.

2056 - The South/Central American Union becomes fully integrated. They send troops out to Mexico to take it back from the Americans.

2057 - The SCAU takes back the south half of Mexico, while agreeing on a treaty with the Americans, to split the country in two. With North Mexico becoming a state of the AE. The AE make this area a prime oil production area and industrial center. The AE launches its first colony ship from the Titan platform. Its destination - Mars, to leave Earth which is dying of global warming, nuclear pollution, and overall unstable weather patterns.

2060 - After 6 long years at war with the EU, the DSCG finally overtakes the EU. The American Empire Finishes its first colony on mars, with a population of 10,000. The Global temperature has risen at least a degree and a half.

2065 - The DSCG's relations with other countries are not doing so well, it appears the DSCG is very nationalist at this point.

2067 - The AE launches its second Colony ship, for mars, to colonize another part of it. This one has technology that will be used to begin an attempt at terraforming mars. The DSCG launches a series of payloads to the moon. Its cargo is unknown.

2068 - The DSCG begins to bolster Intercontinental weaponry in Europe and east Asia. They express their concern that the American empire is going to poison what is left of humanity. The American Empire Begins to Bolster their weaponry stations in Japan, Australia, and The East Coast of North America.

2070 - During a peace talk at what's left of the United Nations, the DSCG representatives openly insulted the American representatives. 2 weeks later, The DSCG reveal that it has been building a secret weapons platform on the moon's surface with local materials. The DSCG declares war on the American Empire, and vice-versa. Both countries used nuclear weapons, but the DSCG were mainly using their Moon platform, which shot small car-sized slugs at very high speeds toward the earth (total travel time 5 minutes). The Americans used their Titan Platform to shoot down missile sites in the DSCG, but it was too late. The Nuclear detonations around the world would cause irreparable damage to everything. Humanity is reduced to a population of only 2 billion total on Earth, with a previous estimate of over 6 billion. Earth has been ruined. The Oceans are now a toxic mix of Radiation, and toxic waste from dead sea life. The Atmosphere is potent in some areas, as well as the areas beneath them. Most of the middle east is inhospitable, most of the DSCG is completely radioactive from the microwave rays from TITAN. In a last ditch effort, the Americans turn TITAN towards the moon base, and fires at full power. Not only did it overload titan's main reactor, but cause a massive explosion on the surface of the moon. The Americans didn't know how deep the DSCG dug down on this contraption, but it comes to surface that the entire complex was bigger than what was on the surface (they had been working on this for YEARS). The Entire complex exploded and took a quite large piece of the moon with it. This explosion not only created thousands of pieces of debris that will eventually rain down on Earth, but caused the

# Slipstream

## Official Story Line

---

10

moon to change orbit. The new orbit put the moon in a decay that would eventually slam into earth. (due to the moons off-axis center of gravity, the rotation has basically turned it into motor with with dead weight on one side. [it wobbles..]). Countries begin to shield population centers with large dome structures similar to the ones used on mars for colonization. Work on these domes were pushed beyond everything.

2072 - Many of the domes are completed. The Americans begin to evacuate the Earth for Mars, where they will be able to avoid the catastrophe at hand. The DSCG comes to a similar solution, but instead will settle on a different area of mars. Information surfaces, and the world finds out that the DSCG had been secretly stashing nuclear shells for their moon cannon; which caused the massive explosion that destabilized the moon.

2073 - The Earth plunges into a miniature ice age, but is short lasting due to the nuclear warming, and due to the moons change in orbit.

2075 - The American Empire and the SCAU begin to draft an alliance against the DSCG. The DSCG begin work on their evacuation project, which involves launching stage one of their orbital space dock, which will construct several ships to shuttle people to mars. China Joins the DSCG, hoping to accelerate this evacuation project.

2078 - The DSCG successfully launch their first shuttle, with a crew, and heads to mars. the American Empire and the SCAU form a new Alliance called the United Nation of Combined Governments. The Estimated year of Earth's Destruction stands at 2101.

2083 - Both Countries have evacuated approx. 50 million people to mars. The Moon closing orbit has caused the tides to wipe out many coastal cities. Several Volcanoes Erupt violently. The Orbital wobble of the Moon has caused pieces of it to break off and hit earth. The moon is currently off its center of gravity, and is tossing it self around in different orbits.

2086 - The current Evacuation has reached just over 300 Million for UNCG countries, and 350 Million for DSCG countries. Tectonic regions are completely unstable. So far, mars has been a welcoming planet, domes are setup around the planet to house cities. a lot of parts are built underground to shield from mars' lack of magnetic fields.

2096 - Earth has lost all surface stability, the moon is very close to the earth, and it appears that on its next few passes the moon will strike the earth.

November 10, 2097 - the moon rises one last time over the earth, before finally its orbit decays and

# Slipstream

## Official Story Line

---

II

strikes earth. The moon hit the earth with enough force that it broke the planet in two. The moon struck the earth so hard that earth's rotation had created enough centrifugal force that it could be classified as an explosion. The Pressure and heat stored in the earth was released and destroyed both Luna and Earth. The debris field spread throughout the inner solar system, with no chance of it ever reforming. Earth, the home of humanity for thousands of years, has finally been destroyed. With only 400 Million Survivors, (250 UNCG and 150 DSCG), and the loss of thousands of years of history, will cripple humanity until its final demise.

2099 - All Evacuation vessels from earth have arrived and preparing to be dismantled for use as colonies.

2106 - The UNCG and DSCG have made a cluster of colonies on separate sections of mars. The DSCG have set up near the northern pole. The UNCG is further south, slightly below the equator.

2111 – Both Factions have begun to recover, and cover a sizable portion of the Martian surface.

2115 – A survey mission by the UNCG an unusually uncovers a thick layer of rock about 70 feet below Cydonia, Mars.

2117 – After excavating for 2 years, the UNCG have found a massive anomaly underground. It turns out that this massive anomaly is some sort of ring.

August 20, 2117 – An accident causes stray power conduits to fall onto the surface of the device. The ground begins to crack all around Cydonia. The massive ring bursts from the ground and slowly climbs into orbit. Humanity has uncovered a Tsaraii slipgate, buried for ages under mars.

2130 – Humanity Discovers what remains of a temple or shrine of some sorts buried under the slipgate site. The DSCG becomes interested in what the UNCG is up to, and tried to extract information about the device. The DSCG launches an offensive against the UNCG.

2133 – The temple that was found three years earlier, was cleared out, and destroyed to prevent the DSCG from gaining any information from the ruins. The Artifacts were sent into orbit to a base on Deimos. (the slipgate orbits slightly further out from Deimos' orbit.

2135 – the UNCG pushes into DSCG territory. The DSCG launch a nuclear attack onto two UNCG dome cities, completely annihilating them. This actions causes several dust storms on Mars that will not settle for ~25 years. This also sets back all ground-to-orbit launches (at least the unimportant ones).

2138 – The UNCG Deimos research facility discovers that the slipgate will respond to several artifacts found in the ruins. Apple, Inc buys out a UNCG rocket manufacturer.

2140 – DSCG moves most of their population underground to prevent ware on the domes due to the massive dust storms. The UNCG has found out how to make the slipgate respond to human computers.

# Slipstream

## Official Story Line

12

2143 – the DSCG and UNCG begin launching attacks at each other again, over infiltration/spying.

2145 – Deimos R&D deciphers the Tsaraii storage methods, and probe the Tsaraii computers for information. 3 months later, they find out how to align the slipgate to connect to another slipgate.

2149 – the UNCG devise a system that will communicate and control the slipgate, and begin testing coordinates 6 months later. (see: Slipgate dialing)

2150 – The Slipgate is opened by feeding in random data into a memory pool, then firing fragments through virtual logic gates which re-fragment the data, separating continuous files/data, and then sends them to the gate. (Eventually this process would reveal how the slipgate interface actually works, and humanity devises a complex program to automate & decode the dialing sequence.) the UNCG sends probes through the gate and find that is orbiting a blue-giant star, with no foreseeable planets. The DSCG completely misses this due to raging dust storms. (the DSCG currently have no orbital stations, as the skies above Mars are controlled by the UNCG.

2152 – with a second attempt, the UNCG successfully open the gate to a system similar to the solar system. With 6 planets orbiting, 2 gas giants, 4 rock planets. While the 4 rocky planets are uninhabitable, a large moon orbits the gas giant closer to the star, and it has an oxygen-nitrogen atmosphere (Not exactly the same ratio as earth), with liquid water on its surface. The temperature on most the moon is hotter than earth, (the average temperature around the equator is around ~110 F.

2155 – The UNCG has decided that mars is too uninhabitable for humanity, and begins to build quick & dirty transports to ferry people to the moon. (the slipgate orbits the same gas giant). The DSCG are still unaware that the UNCG have opened the slipgate.

2156 – a UNCG Dome collapses due to strain from the Martian dust storms.

2159 – The UNCG have completed  $\frac{3}{4}$ <sup>th</sup> of the total evacuation. ]

2160 – The UNCG has packed up the rest of their domes and equipment, leave through the slipgate, and remotely self-destruct the Deimos base. Later that year, the DSCG invade the UNCG dome-cities, to find them totally abandoned.

2162 – The UNCG have set up numerous prefabricated dome-cities on the moon which they have named “Horizon”.

2165 – The Martian dust storms begin to settle, the DSCG finally see the slipgate, and begin to investigate it. The UNCG have begun deciphering the Slipgate near Horizon, and plot two more slipgates, one that has a semi-habitable planet, and one in the middle of deep space.

2167 – the DSCG detects a small orbital wobble in Mars' orbit, due to the loss of earth. (Earth was ripped apart by Luna's impact.) The wobble will put mars in a slightly closer orbit to the sun, but will

# Slipstream

## Official Story Line

---

13

destabilize the asteroid belt. They realize they need to leave mars.

2169 – The DSCG have tapped into the slipgate and is able to use UNCG data banks to begin plotting a course.

2170 – The DSCG successfully plot a course across the galaxy, and find a large planet (~2.5x Earth Size) orbiting a main sequence sun-like star. 4 months later, they begin moving people and equipment to this planet. Only Minor Hiccups from the gate.

2172 – (November) The DSCG encounter a problem with the Slipgate, leaving them disconnected to their new world for about 3 months. Only about half of the DSCG have been evacuated.

2173 – (January) The DSCG reestablish contact, and find that the colony has successfully been up and running. Evacuation continues. The UNCG plots another gate, and finds that it leads to VY Canis Majoris. (very far away though..but would it matter?)

2175 – The DSCG complete their evacuation, and abandon Mars. The UNCG have discovered a way to Terraform Horizon.

2178 – The UNCG starts the long process of terraformation of Horizon. The DSCG officially establishes the colony of столица (Capital).

2180 – The UNCG find an object floating in a very low orbit near VY Canis Majoris. It will take several years to devise a craft that can reach that point without vaporizing.

2183 – Both the UNCG and DSCG have expanded across several planets. UNCG = 4 planets, DSCG = 3 planets. Human population begins skyrocketing as living conditions in both empires improve dramatically.

2184 – The DSCG Open up two more planets, and find several artifacts on one of them (labeled G-417). The area is heavily excavated, and researched.

2187 – The UNCG Send a ship, prepared for VY Canis Majoris' conditions, to recover the artifact. The DSCG unearths a Shrine of some sorts.

2189 (Late) – The Ship sent to the depths of VY Canis Majoris Returns with the artifact in tow. It appears to be a Tsaraii Ship (the Tsaraii built the slipgate system.). The DSCG discovered a Tsaraii data library amongst the ruins.

2190 – The UNCG have studied the Tsaraii ship for several months. They have discovered ways to improve ship design, and even create a slipstream generator so slipgates are not needed for every jump.

2195 – the DSCG Gain access to the Tsaraii data library, and begin translating the data.

# Slipstream

2198 – The UNCG developed a prototype slipstream generator. The test resulted in a rather large explosion.

2200 – In November, the DSCG access an entry to discover the means of creating a slipstream generator.

2202 – a second attempt by the UNCG, created a working Slipstream generator. While, not as successful as the Tsaraii drive it was based off of, it could travel up to 250 light years almost instantly. However, the downside was that the drive required a massive amount of power, and once used it needed to recharge for about a day.

2203 – The DSCG build their first slipstream generator from data in the Tsaraii database. The drive is successful, (and actually out does the UNCG drive, with a max jump of 260 ly, and with a recharge time of 8 hours). More research indicates that the Hammer of Light is the way to the ultimate level of existence.

2206 – the UNCG finds out about a “Light Forge” in the Tsaraii ship's databanks. It appears to be a device used to build contained dimensions. The data is fragmented beyond repair, so it is stored in the UNCG research laboratory on Horizon.

2207 – The UNCG fits several ships with the Slipstream Generator. Using the Advanced coordinate system from the Tsaraii ship, they are able to jump to very precise locations, and unlock slipgate alignments very quickly. The DSCG use their slipstream generators to begin colonization of other worlds through the slipgate, similar to the UNCG.

2210 – >2300 – Both the UNCG and DSCG begin colonization and spreading throughout their corners of the galaxy. The Human population explodes as living conditions become much better, and more space is available. However, both empires have created a massive military to control this massive civilization, and each rules with an iron fist. Around 2300, the UNCG's conditions make the rich, richer, and the poor, poorer. Corporations are running wild, without government restrictions to contain them. Current Dominate Corporations: Apple, Inc., IBM, Rhino Technologies, and Harper Construction. While the living conditions have lost their charm, the population continues to grow rapidly. With Internal Tensions at an all time high in both empires, this just sets the stage for a war of epic proportions.

2301 – The DSCG sees a radical religious cult rise to popularity, created by several people working at the Tsaraii dig site. The cult tends to get media attention more than it should, showing they have control of the media somehow. The Dominion of Light is a cult that thinks the Tsaraii technologies have a special power to them that can empower humanity beyond its roots.

# Slipstream

## Official Story Line

15

2304 – The UNCG Elect new Congress officials, and a new President. This new legislation wants to put more funding into Military Enforcement, and Corporate Control. The DOL gain power by placing people into the DSCG Parliament.

2307 – The DSCG Government is overthrown by the DOL officials, and a new order is created to find the hammer of light and use it to gain universal power. The UNCG *Trinidad* Super-Tanker & Transport leaves UNCG Colony world 56G7 with three frigates for escort. It is heading to the far end of the UNCG controlled area, to bring fresh supplies to the new colonies. Current Slipstream drive configurations set the total journey time to about 4 days, 9 hours. 2 Days in, the *Trinidad* veers off course and jumps toward the core of the galaxy. While, in its own, its not a problem, during the re-charge cycle, a ship appears near the *Trinidad*, when scanned for IFF tags, the ships proceeded to blast the *Trinidad* to pieces. What the DSCG do not know, is that the ship sent a wide band SOS to all UNCG ships.

4 Days Later – The UNCG *Imperial Hammer* and its fleet arrive at the scene. The *Trinidad* had been ripped to pieces by what looks like nuclear and plasma weaponry. No Survivors. 20 minutes later, the UNCG *Ulysses* (a mobile fortress, AKA Hypercarrier Class) arrives on scene, on full alert. The two fleets do a sensor sweep of the entire area. Eventually, a science team is assemble to piece together just what happened to the *Trinidad*. About a week into the search, the UNCG detect an incoming slipstream signature. While the UNCG do not know who they are up against, the DSCG know exactly who the UNCG are, and are prepared to destroy them. The Two Fleets battle for about 3 days, with each fleet attacking in waves. After 3 days, the UNCG Retreat back into known space, the DSCG follow, and are destroyed by colony g1456's Orbital Fleet. Soon after, the UNCG declare war on the DSCG, and the two factions, who know almost nothing about each other, begin a war that will last well into the future.

-----Era II Begins-----

2310 – The UNCG and DSCG have be engaging each other in hit & run tactics. The DSCG decide to attack a colony directly by jamming UNCG slipstream distortion generators. The Attack is successful, and leaves x864л a smoldering ball of ash. Later that Year, the UNCG bombard two DSCG colonies.

2311 – 2530 - The UNCG and DSCG fight constantly for the entire time span. Each side is left in a gridlock, with no foreseeable winner to any battle. Basically, everything is Zero-Sum. Each sides' economy is devastated, and the morale has diminished to zero.

2531 – The UNCG develop a weapon that can wipe out anything on the surface (and 20 miles into) of a planet, and its surroundings. The Weapon is tested on a DSCG colony, and eradicates the planets outer layers, a long with its moon, and several hundred DSCG ships. The UNCG has the upper hand for a few months. The DSCG follow up with a orbit-to-ground laser cannon which burns atmospheres off with one shot.

2532 – the DSCG begin reverse engineering Tsaraii technologies discovered in several archaeological digs found around the the galaxy.

2537 – The DSCG roll off the first *Leviathan* dreadnaught warship reverse engineered from Tsaraii ship technology.

2538 – the DSCG deploy their *Leviathan* against a UNCG shipyard, and eradicate it all.

2540 – The UNCG finish a counter to the *Leviathan*, which is a directed particle projection system, that can burn through DSCG hulls like butter.

2541 – 2630 – The UNCG and DSCG fight it out with no significant achievements on either side. The UNCG become more Imperialistic, and actually abandon their Congress system for a more powerful absolute monarch system. Emperor Alexander, is elected the first Emperor of the new UNCG Executive branch, and creates a stronger government, with a better military, and instills martial law throughout the UNCG. The Emperor plans to create a stronger grip onto the UNCG territories, to create a more unified domain. With that, the DSCG are having a hard time getting into the UNCG's inner colonies, especially Horizon.
